Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3,7-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Snyder (US 6342482; 1/29/02) in view of Bosserelle (US 4740432; 4/26/88), and JP 03251520; 11/11/91.

Snyder teaches a shampoo for controlling lice comprising 0.1 to 30% spinosad (spinosyn A and D). Snyder's composition is applied to hair to rid hair of lice (ruminant or companion animals). See abstract, column 2 line 49 – column 4 line 13. Snyder does not teach the shampoo comprising oleic acid and isopropyl myristate. However, Bosserelle teaches a shampoo composition comprising 8 to 14 % oleic acid. See abstract, column 2 line 30 – column 3 line 27, claim 11. JP '520 teaches a shampoo composition comprising 0.1 to 20% isopropyl myristate. See abstract. The oleic acid and isopropyl myristate are compounds derived from vegetable. These compounds are more effective than fatty acid and ester thereof derived from animal fat. They are more effective in that they are more compatible with epidermal of the head. See column 1 – column 2 line 44. It would have been obvious to one having ordinary skill in the art to have made a single composition comprising spinosad, oleic acid and isopropyl myristate. One having ordinary skill in the art would have been motivated to do this in an

Application/Control Number: 10/048,242

Art Unit: 1616

effort to make a composition that would have a good compatibility with the epidermis. With respect to the amounts of ingredients one having ordinary skill in the art would have been expected to determine the optimum amounts of ingredients. One would have been motivated to do this in order to make the most effective shampoo.

Election Requirement

Election is final after view o Applicant's arguments. The election of a composition comprising spinosyn A, isopropyl myristate, and oleic acid is not allowable. See art rejection above.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alton N. Pryor whose telephone number is 703 308-4691. The examiner can normally be reached on 8:00 a.m. - 4:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman Page can be reached on 703-308-2927. The fax phone numbers for the organization where this application or proceeding is assigned are 703 305-3592 for regular communications and 703-305-3592 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308-1235.
